

Construction Noise & Vibration Monitoring from Spectrum Acoustic Consultants

Ongoing noise monitoring during construction of Staythorpe 1650 MWe CCGT Power Station, Nottinghamshire

Noise during the construction phase of a building or engineering project has the capability of causing significant disturbance to residents. Spectrum Acoustic Consultants services include:

- Attended measurements of noise
- Continuous unmanned noise monitoring at up to 4 positions (for noise) and 1 position (for weather)
- Remote download of data and audible recordings, and analysis capability on unmanned noise and weather monitors allows 'event analysis' and immediate action, without visiting site
- Standard reporting graphical output (see next page) and reporting sheets
- Vibration monitoring of piling and other construction activity

Monitoring noise during demolition
